Whois Abbreviated Record

Domain Whois record

A Whois record is the details of a domains registration.

You can use the our whois query to find the record for any domain with a valid whois record. A whois record is generally held in two locations. An abbreviated record is held with the central registrar for the top level Domain (TLD) and a full whois record which has admin, technical and business contact details.

Although the whois record should be kept up to date, often the contact details will be incorrect. For some whois records a 'Secret registration' will appear to indicate that the person or organization registering the domain requires anonymity.
